list five important points

1. Python is a readable programming language used for software, automation, data analysis, and AI.
2. Learn core concepts such as variables, data types, input, and operators.
3. Use conditions, loops, collections, and functions to build programs.
4. Practise debugging and working with files and modules.
5. Build small projects and strengthen Python fun-

Give me five multiple-choice questions

Five Multiple-Choice Questions

1. What does `print()` do in Python?
   A. Gets input from the user
   B. Displays information on the screen
   C. Creates a list
   D. Repeats a loop
2. What type of value is `"Asha"` ?
   A. `int`
   B. `float`

Explain one concept with an example.

Variables

A variable is a name that refers to a value. It lets you store information and use it later.

```
name = "Asha"
print(name)
```

Here, `name` stores the text `"Asha"`. The program displays `Asha`.

Prepare short revision notes.

Python: Short Revision Notes

- **Python** is a readable programming language used for software, automation, data analysis, and AI.
- `print()` displays information. `input()` gets text from the user.
- **Variables** store values, such as `age = 18` .
- Common data types: `int` (whole number), `float` (decimal), `str` (text), and `bool` (`True` or `False`)

Compare two topics from my PDF.

`for` loops vs `while` loops

Both repeat code, but they are used in different situations:

- **`for` loop:** Repeats over a sequence or a set number of values.

```
for number in range(1, 4):
    print(number)
```

This prints `1`, `2`, and `3`.

Ask a question whose answer is not in my PDF.

24 minutes ago

How do Python decorators work, and how would you write a simple custom decorator?

Ask an unrelated question and observe the answer.

Unrelated question: What is the capital of Japan?

Answer: This information is not available in the uploaded study material.

24 minutes ago

what is the main topic of my pdf?

The main topic of your PDF is **learning Python as a beginner**, with a focus on building skills useful for studying artificial intelligence. It covers Python basics, practice questions, mini projects, and a suggested learning roadmap.

27 minutes ago

Explain the first topic in simple words.

The first topic is **"What Is Python?"**

Python is a programming language—a way to give instructions to a computer. It is designed to be readable and is used for tasks such as building software, automating work, analysing data, and creating AI applications.
